I	Thesis	1
1	Introduction	3
1.1	Motivation and context	4
1.2	Contributions	4
1.3	Thesis outline	5
2	Vehicular ad hoc networks	7
2.1	Introduction	8
2.2	Definitions and specifications	8
2.2.1	Mobile ad hoc networks (MANETs)	8
2.2.2	Vehicular ad hoc networks (VANETs)	8
2.2.3	Network specification	8
2.2.4	Technology specification	8
2.3	Simulations of vehicular networks	9
2.3.1	Motivation and challenges	9
2.3.2	Network simulations	9
2.3.2.1	Protocol stack specification	9
2.3.2.2	Network simulators	9
2.3.3	Traffic simulations	9
2.3.3.1	Mobility models	9
2.3.3.2	Traffic microsimulators	9
2.3.4	Coupling of network and traffic simulations	9
2.3.4.1	Impact of mobility on network	9
2.3.4.2	Impact of network on mobility	9
2.3.4.3	VANET simulation platforms	9
2.4	Vehicular traces	10
2.4.1	Real-world traces	10
2.4.2	Artificial traces	10
2.4.2.1	Data sources	10
2.4.2.2	Traffic demand models	10
2.4.2.3	Examples	10
2.5	Recap of key points	11

CONTENTS

3	Traffic Information Systems and Management	13
3.1	Introduction	14
3.2	Achitecture	15
3.2.1	Centralised	15
3.2.2	Distributed	15
3.3	Examples of Information Systems	15
3.3.1	Luxembourg	15
3.3.1.1	Centralized: CITA, Ponts et Chausses	15
3.3.1.2	GPS-based: Live Traffic	15
3.3.2	California	15
3.3.2.1	Connected Corridors	15
3.4	Traffic management	15
3.4.1	Traffic congestion	15
3.4.1.1	Recurrent congestion	15
3.4.1.2	Non-recurrent congestion	15
3.4.1.3	Flash crowd effect (FCE)	15
3.4.2	Demand management	15
3.4.2.1	Routing games	15
3.4.2.2	Wardrop's principles	15
3.4.2.3	Selfish routing	15
3.5	Potential of vehicular networks	15
3.5.1	Traffic information collection	15
3.5.2	Traffic management	16
3.6	Recap of key points	17
4	Realistic simulation platform for VANET-based TIS	19
4.1	Introduction	20
4.2	Existing platforms	20
4.3	Generation of realistic vehicular traces	20
4.3.1	VehiLux	20
4.3.2	Dynamic route assignment with Gawron's algorithm	20
4.3.3	Evaluation of traces	20
4.4	Architecture	20
4.4.1	Network simulator NS-3	20
4.4.2	Traffic simulator SUMO	20
4.4.3	Bi-directional coupling with TraCi	20
4.4.4	Application layer	20
4.5	Recap of key points	21
5	TrafficEQ - a VANET-based TIS	23
5.1	Introduction	24
5.2	Problem definition	24
5.3	System overview	24
5.4	Data dissemination	24
5.4.1	Overview of data dissemination methods	24
5.4.2	The proposed dissemination method	25

5.5	Traffic estimation	25
5.6	Routing strategies	25
5.6.1	The shortest time	25
5.6.2	Probabilistic	25
5.6.3	Hybrid	25
5.7	Evaluation metrics	25
5.8	Recap of key points	26
6	Evaluation of TrafficEQ	27
6.1	Introduction	28
6.2	Research questions	28
6.3	Simulation settings	28
6.4	Simulation results	28
6.4.1	The shortest time	28
6.4.2	Probabilistic	28
6.4.3	Hybrid	28
6.5	Discussion and conclusions	28
6.5.1	The quality of traffic information	28
6.5.2	The performance of routing strategies	28
6.6	Recap of key points	29
7	Community detection	31
7.1	Introduction	32
7.2	Notations	32
7.3	Social networks	32
7.3.1	Social network models	32
7.3.2	Analysis	32
7.4	Dynamic networks	32
7.4.1	Types of dynamic networks	32
7.4.2	Analysis	32
7.5	Community definition	32
7.5.1	Global	33
7.5.2	Local	34
7.5.3	Process-based	34
7.5.4	Community attributes	34
7.6	Community detection algorithms	35
7.6.1	Algorithms for static networks	35
7.6.2	Algorithms for dynamic networks	35
7.6.3	Community detection and graph partitioning	38
7.6.4	Community detection and graph clustering	38
7.7	Algorithms applicable for VANETs	38
7.7.1	Model-based	38
7.7.2	Vertex clustering	40
7.7.3	Clustering in VANETs	41
7.8	Community analysis	41
7.8.1	Analysis of community structure	41

CONTENTS

7.8.2	Temporal analysis of communities	41
8	Crowds - a community detection algorithm for VANETs	43
8.1	Introduction	44
8.2	Overview	44
8.3	Community assignment	44
8.3.1	Local network topology functions	44
8.3.2	Mobility similarity measures	44
8.4	Evaluation metrics	44
8.5	Evaluation of Crowds	44
8.5.1	Simulation settings	44
8.5.2	Simulation results	44
8.5.3	Conclusions	44
8.6	Community-based TrafficEQ	44
8.6.1	Use of communities in data dissemination	44
8.6.2	Use of communities in demand management	44
9	Conclusions and perspectives	45
9.1	Conclusions	46
9.1.1	VANETs modelling	46
9.1.2	VANET-based TIS simulation	46
9.1.3	TrafficEQ	46
9.1.4	Crowds	46
9.2	Perspectives	46
